ARTUR USENOV

BACKEND ENGINEER | GO & PYTHON | DISTRIBUTED SYSTEMS & AI INFRASTRUCTURE

Bishkek, Kyrgyzstan · +996 501 271 007 · lostfrxks@gmail.com · LinkedIn · GitHub · Portfolio

Open to remote roles and international relocation

PROFESSIONAL SUMMARY

Backend engineer with production experience in marketplace microservices, event-driven workers, and data workflows using Go, Python, PostgreSQL, Kafka, and Kubernetes. Experienced in AI-assisted catalog automation and semantic search with LLM APIs and Qdrant, including reliable batch processing at six-figure dataset scale.

CORE SKILLS

Languages: Go, Python, SQL, TypeScript

Backend & Data: FastAPI, Django/DRF, PostgreSQL, Kafka, Redis, Qdrant, SQLAlchemy, Alembic, REST APIs, transactional outbox

Platform: Docker, Kubernetes, GitLab CI/CD, ArgoCD, Helm, Rancher, Vault, Linux

Quality: pytest, Ruff, Playwright, schema validation, dry-runs, rollout verification, production data checks

PROFESSIONAL EXPERIENCE

Backend Developer - MDigital / MMarket **2026-Present**

Marketplace platform engineering and AI-powered catalog automation

- Contributed to separating Go marketplace services into Kubernetes API, worker, and outbox-worker workloads; implemented backward-compatible runtime modes for independent HTTP and background execution.
- Built AI-assisted catalog mapping pipelines with LLM APIs, Qdrant semantic search, Kafka workers, confidence scoring, and guarded post-processing.
- Processed 36,143 products with zero failed segments; prepared a 253,897-product analytical dataset and 550,602 cleaned attributes for production handoff.
- Diagnosed PostgreSQL migrations and deployments using schema verification, temporary Kubernetes jobs, safe metadata repair, rollout validation, and post-deploy smoke checks.

Software Developer Intern - MBank / MMarket **Dec 2025-Feb 2026**

Personalized recommendation systems for digital payment services

- Developed a FastAPI recommendation service over millions of monthly transactions using frequency/recency, item-item similarity, time decay, and transition-based discovery signals.
- Built training and prediction endpoints, Recall@K/MRR@K offline evaluation, artifact persistence, and an interactive demo for repeat and discovery modes.

SELECTED PROJECTS

ATLAS-STORE: Live e-commerce platform with Django REST, PostgreSQL, Redis, Celery, storefront, checkout, admin/order tooling, integrations, Docker deployment, and tests.

Embedding Search: FastAPI and SQLAlchemy semantic-search service for marketplace listings using embeddings, cosine similarity, ingestion, and filters.

AGL.KG: Live localized medical-equipment catalog with automated product imports, document-oriented sales workflows, WhatsApp contact, and automated tests.

EDUCATION & AWARDS

Software Engineering and Social Transformation - TSI AUCA **2023-2026**

Graduated with Honors (Red Diploma) · GPA 3.80 / 4.00

- **Winner - Mbank Ecosystem x OpenAI Codex Challenge, 2026:** recognized for applying AI/Codex to improve MMarket engineering workflows and process quality.
- **ICPC NERC 2025 Finalist:** placed 9th of 61 teams in the Kyrgyzstan qualification.
- **Winner, TSI Programming Contest 2026** · 300+ LeetCode problems solved · 100 Days Badge 2025.
